Welcome Note

Bridging Science and Application

The reason for the choice of the title for our conference was to strengthen new ways and push for translation.

New insights naturally lead to open questions which we want to investigate and find solutions. However, we have to keep in mind the high goal of this research – to find solutions for people with disabilities, end users and not to forget their relatives. This year, the Conference has, besides workshops on specific topics one very special side event: The CYBATHLON BCI Series 2019. Pilots with physical impairments, who control computer avatars with their thoughts, will demonstrate how far brain-computer interface research has come. The BCI race will take place in front of a live audience and – challenging for all involved, pilot as well as developing team: far away from any lab conditions. As a special keynote, we present Prof. Robert Riener (ETH Zurich, Switzerland). He is full professor of sensory motor systems and the initiator of CYBATHLON. With his talk he will make a link between the BCI field, his research disciplines and CYBATHLON.

Furthermore, participating teams are invited to present their technologies, methods and algorithms in form of posters throughout the whole conference – hopefully provoking stimulating discussions. This 8th Graz Brain-Computer Interface Conference (GBCIC2019) offers the opportunity for extensive discussions and exchange of ideas among BCI experts from more than 20 countries. We received 76 scientific contributions from roughly 250 authors. The scientific contributions have been peer-reviewed by at least two reviewers (acceptance rate 87%) and collected in form of open access conference proceedings.

For the Conference itself, we have been able to setup a colorful and multifaceted program. We are very happy that the GBCIC2019 has been officially endorsed by the BCI Society. Further, we are lucky that outstanding experts in the field, Dr. Damien Coyle (Ulster University, Northern Ireland, UK), Prof. Moritz Grosse-Wentrup (University of Vienna, Austria), Dr. Robert Gaunt (University of Pittsburgh, PA, USA), Dr. Mariska Vansteensel (University Medical Center Utrecht, The Netherlands), and Prof. Pim Haselager (Radboud University Nijmegen, The Netherlands) accepted our invitation to present keynote addresses at the Conference.

We hope that this conference contributes towards a strong scientific cooperation among our field, and we wish all participants an exciting, stimulating and productive Graz BCI Conference 2019!

Gernot R. Müller-Putz
Conference Chair

Prof. Dr. **Gernot Rudolf Müller-Putz** is head of the Institute of Neural Engineering and its associated Laboratory of Brain-Computer Interfaces. He received his MSc in electrical and biomedical engineering in 2000, his PhD in electrical engineering in 2004 and his habilitation and “*venia docendi*” in medical informatics from Graz University of Technology in 2008. Since 2014 he is full professor for semantic data analysis. He has gained extensive experience in the field of biosignal analysis, brain-computer interface research, EEG-based neuroprosthesis control, communication with BCI in patients with disorders of consciousness, hybrid BCI systems, the human somatosensory system, and BCIs in assistive technology over the past 18 years. He has also managed several national projects (State of Styria) and international projects (Wings for Life, EU Projects) and he recently coordinated the EU Horizon 2020 project MoreGrasp. Furthermore, he organized and hosted six international Brain-Computer Interface Conferences over the last 13 years in Graz and chairing the 8th Conference in Sept. 2019. He was also in the Programm Committees of the 7th International BCI Meeting 2018, 10th NeuroIS Retreat, ICCHP 2018. He is Review Editor of *Frontiers in Neuroscience*, special section Neuroprosthetics, Associate Editor of *IEEE Transactions in Biomedical Engineering* and Associate Editor of the *Brain-Computer Interface Journal*. Since August 2019 he is Speciality Chief Editor of *Frontiers in Human Neuroscience: Brain-Computer Interfaces*. He has authored more than 156 peer reviewed publications and more than 180 contributions to conferences which were cited more than 14300 times (h-index 60). Recently he was awarded with an ERC Consolidator Grant “Feel your Reach” from the European Research Council. In May 2017 he received the Ludwig-Guttman Award from the German Medical Spinal Cord Injury Association (DMGP). In May 2018 he was elected into the Board of Directors of the International Brain-Computer Interface Society. In May 2010 he received the Science Award from the State of Styria.

Jonas Christian Ditz is university assistant at the Institute of Neural Engineering (BCI-Lab), Graz University of Technology, Austria. He received his M.Sc. in Bioinformatics from the Eberhard Karls University Tübingen in 2018. From 2016 to 2018 he worked as a research assistant at the Max Planck Insitute for Biological Cybernetics in the Cognition & Control in Human-Machine Systems group. Currently he is working towards his PhD degree in computer science.

Selina Christin Wriessnegger is assistant professor at the Institute of Neural Engineering (BCI-Lab), Graz University of Technology, Austria. From 2001 to 2005 she was PhD student at the Max-Planck-Institute for Human Cognitive and Brain Sciences and received her PhD from the Ludwig-Maximilians University. During that time, she spent one year in Rome as research assistant at IRCCS (Fondazione Santa Lucia), Laboratory for Human Psychophysiology. From 2005 to 2008 she was university assistant at the Karl-Franzens-University Graz, section neuropsychology. From 2009 until May 2016 she was senior researcher at the Institute of Neural Engineering (BCI-Lab). In 2017 she was visiting professor at SISSA (Scuola Internazionale Superiore di Studi Avanzati), Trieste. Her research interests are subliminal visual information processing, neural correlates of motor imagery, novel applications of BCIs for healthy users, passive BCIs and embodiment of language acquisition.
